Freight forwarding software CargoSoft GE

International sea and air cargo handling

CargoSoft GE

International forwarding service providers open up connections in worldwide markets by maintaining a physical presence at a range of strategic intermodal hubs. Integration and networking grow more vital with each branch office a company opens to operate more internationally. With CargoSoft GE, we offer nationally and internationally deployable, platform-neutral forwarding software that combines handling for both sea and air freight based on state-of-the-art technological standards.

A range of functions and interfaces

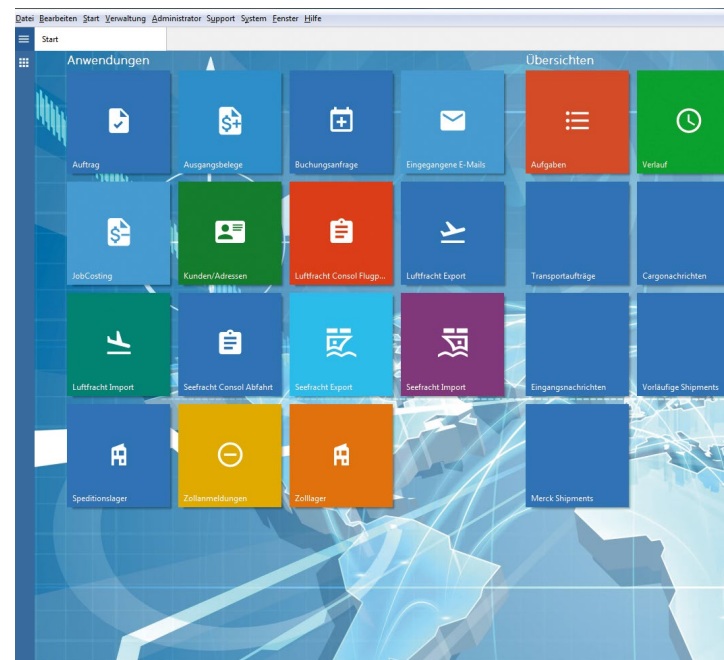

CargoSoft GE is a part of the DAKOSY GE family and thus can be combined with ZODIAK GE (certified for Germany, Austria, Switzerland, the Netherlands and Belgium) as well as the UNIKAT GE (truck, rail) intermodal software in one interface. By using these software packages together, you can simply enter the shipping data just one time to speed up the entire logistics process along the transport chain, including Customs and hinterland processing as well as invoicing in a simple, transparent and cost-effective manner.

In addition, you have the option to expand CargoSoft GE with innovative modules for Supply Chain Management, Rate Management and Customer Relationship Management. The open interfaces to in-house systems and financial accounting also make it easy to integrate forwarding processes into your logistics procedures along the whole length of the supply chain.

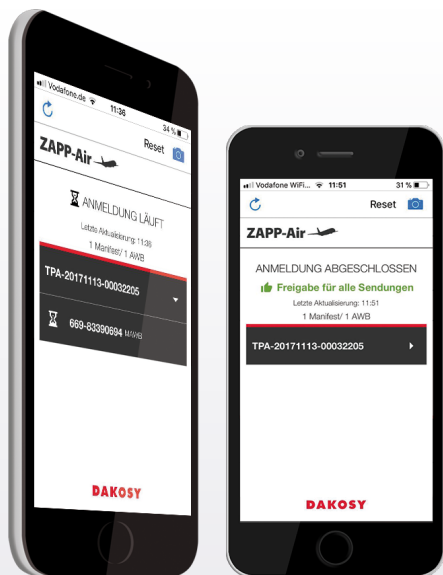

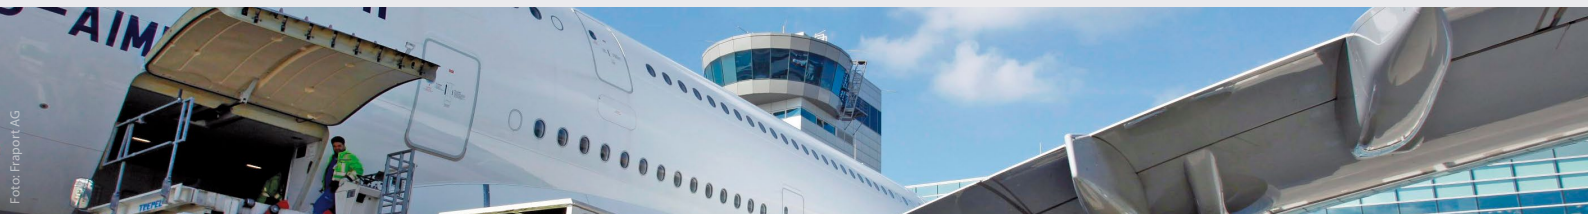

The continuing development of CargoSoft GE ensures that you always have a solution that fits your current needs, both nationally and internationally. Due to its modular principle, its versatile and diverse functionalities and range of applications, the software meets all the needs of cargo shipping – as well as being perfectly suited to air and sea freight forwarders at a national and international level.

WE DIGITIZE LOGISTICS!

We have been dedicated to the success of our work for several decades. We offer communication, IT and software solutions based on the latest technology. DAKOSY was founded in 1982 as a data communication system for the Port of Hamburg, where the roots of our company run deep.

Customers from Hamburg, Germany, throughout Europe and around the whole world use DAKOSY. Regardless of location or hub, our services and applications support over 2,500 companies from the transport and logistics sector in carrying out their challenging tasks. Every day, more than one million transactions are communicated through our state-of-the-art data centers.

If you have questions or would like more information about DAKOSY AG, our services and solutions, please feel free to contact us at any time.

We're looking forward to communicating with you.
