1 Introduction

This document describes the subset of the IFTMCS Message in it's "Acknowledgement" version as defined for the ICS system of DAKOSY.

Why is an IFTMCS used as a reply message?

For most technical as well as some functional responses, the EDIFACT interface to DAKOSY's ICS system employs the APERAK message.

However, the messages sent by customs after the customs system received and processed a ENS declaration or amendmend fulfil another purpose in addition to being an acknowledgement for an inbound message: If the person lodging or amending the summary declaration names a third party (e.g. the carrier) within the declaration, customs will send a copy of the acknowledgement to this party. This enables scenarios where the importer itself can file the ENS declaration, naming the carrier who then (after receiving the acknowledgement data for the declaration) might send the arrival notice to customs.

For this purpose, customs acknowledgement messages for ENS declaration and Amendment (E_ENS_ACK and E_ENS_AAC) contain not just the MRN number, but also some basic data about the declaration itself.

The APERAK message is not sufficient to carry this amount and type of data, therefore the IFTMCS is used.

2 Usage scenarios

2.1 Usage scenario "ENS Acknowledgement"

As shown in the image above, a third party lodging a summary declaration via DAKOSY or utilizing another system can indicate the actual carrier in its declaration. The carrier would then receive a copy of customs' acknowledgement message, containing the MRN along with some basic data of the declaration. If the carrier is a DAKOSY customer, the data will be forwarded using the IFTMCS "Ack" described in this document.

The image below depicts a more simple scenario, where the carrier files the ENS declaration itself. This would also result in an IFTMCS “Ack” being sent back. However, an error would result in an APERAK being sent to the carrier.

2.2 Usage scenario “ENS Amendment”

The scenario for an ENS Amendment is basically the same, with the following differences:

- The message sent to customs will be of type E_ENS_AMD
- The message sent back from customs will be of type E_ENS_AAC (Acceptance) or E_ENS_ARJ (Rejection)
- The IFTMCS sent by DAKOSY will have code 312 in BGM Element 1004
- In case of errors the APERAK sent by DAKOSY would have code “E_ENS_ARJ” in BGM element 1000

3 Differences between IFTMCS for E_ENS_ACK and E_ENS_AAC

The following differences exist between the IFTMCS being sent for an E_ENS_ACK and an IFTMCS being sent for an E_ENS_AAC:

E_ENS_ACK	E_ENS_AAC
BGM Element 1004 = 301	BGM Element 1004 = 312
---	Contains additional DTM+375 segment, specifying the time of the amendment
---	Contains additional NAD+AG segment, specifying information about the representative
